		Revision Date: -
		Revision No:

Necessary conditioning processes are carried out for the city mains water in our facility and it is used in this way. The quality parameters of the water subjected to conditioning processes are continuously measured and monitored to ensure that they are within the defined limits.

At the same time, the water consumption values of the facilities are regularly monitored on a monthly basis and water leakage controls are carried out continuously and intervention is provided in the fastest way.

For a sustainable environment, water of a quality that complies with both the discharge limits we are subject to in the Water Pollution Control Regulation and international legislation and standards is discharged to the receiving environment. The quality of the effluent we discharge is periodically monitored by the relevant institution of the relevant Municipality. In these follow-ups, Suspended Solids, Conductivity, Dissolved Oxygen, pH, Temperature and Chemical Oxygen Demand parameters of the discharge water are monitored and evaluated.
